

# IMAGE VAULT® PRO

Everything you want to see in a multifunction DVR.

## Image Vault PRO: When you're ready to be PROactive about your security.

Every day, more and more of America relies on Image Vault PRO for a cost-effective answer to security needs.

No wonder. Image Vault PRO offers more features, in an "all-in-one" package, than any other digital video recorder. For example, our **m.a.d.e.** (Multiple Application Data Exchange) Interface that lets you quickly pinpoint events by capturing information from up to eight different RS-232 devices, and organize it into a 4.8-million-line searchable database. POS systems, alarm panels, access-control systems, intelligent safes, ATMs: they're all covered by **m.a.d.e.**

And that's just the beginning. 16 dry-contact inputs, 256 user-programmable interface triggers, patented Pre-Event Recording (which captures pre-event video from all cameras instead of a single camera like other systems), lots of advanced scheduling options: Image Vault PRO has exactly what you need to manage your security better.

### The features no true DVR should be without:

**Remote Access** – Allows for remote viewing of live and recorded images anytime, anywhere – if you can dial in via phone line or network, you're there.

**Internal Motion Detection** – Extends hard-drive storage capacity by up to 50%.

**Triplex Operation** – Records without interruption – even during event playback or live viewing.

**Multifunction** – No tapes, VCRs, switchers, or multiplexers – your existing cameras have you covered.

**Easy Downloads** – Transfer video and data to the built-in CD-R in minutes. You can also email, print, or view images remotely.

**Alarm Out** – Program Image Vault to alert you via pager and/or email for system and data-triggered events.

**Auto Reboot** – Image Vault will automatically reboot in the event of a power failure. It also ships with a Tripp-Lite 525 SER UPS.

So look into Image Vault PRO: the DVR that will save you time, trouble, and cost by letting you be proactive about your security.

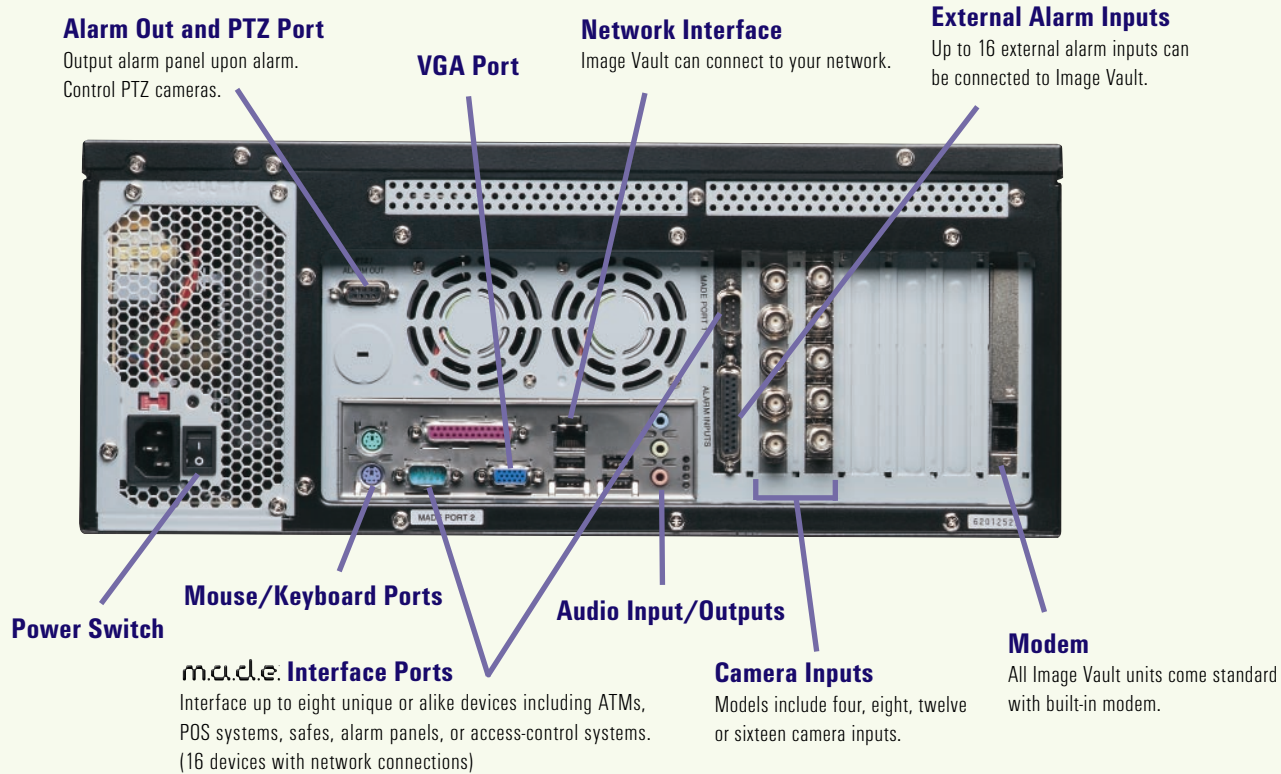

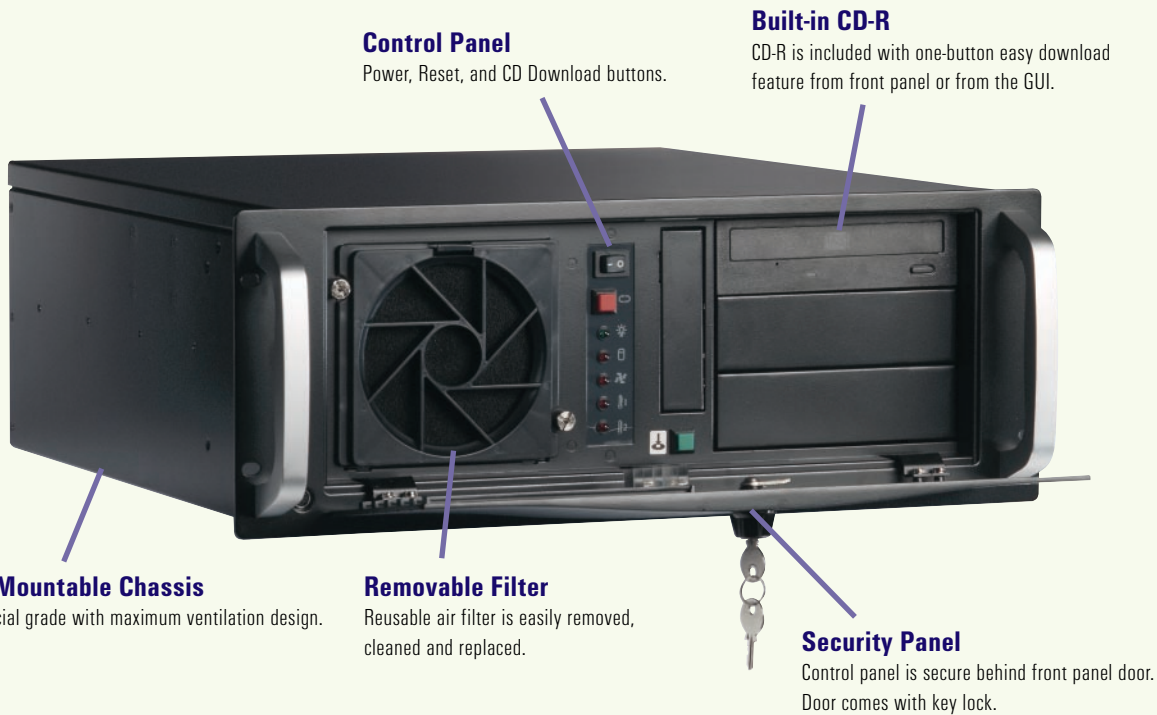

## More features, more advantages, more capability: at one of the industry's best values.

- 4-, 8-, 12- or 16-camera models (Up to 640 cameras with I.V. Max Server)
