

Image Vault Expands Product Suite: Announces Release of Software Version 9.3.0, a New High Speed Recording Version (480FPS), and Enterprise Video Analysis (EVA) Customizable Software Application

New Albany, IN (May 28, 2008) - Image Vault, a member company of the FireKing Security Group, today announced the release of the latest upgrade to its Image Vault product suite with Image Vault Software Version 9.3.0. The latest upgrade offers to the market a hybrid DVR system that enables deployment of both analog and IP network cameras, with a capacity of up to 32 cameras on each unit. Image Vault 9.3.0 also has expanded the product's storage capacity to up to 3Terabytes. Furthermore, Image Vault's Pro Command DVR is now available in a 480 frames per second format for applications requiring high speed recording.

The company also announced the availability of the Image Vault Enterprise Video Analysis (EVA) Customizable Software Application.

"As Image Vault's market share continues to grow, we are consistently adding enhancements and features based on specific feedback from our user base," said David Goffinet, Image Vault's Senior Vice-President & COO. "With our deep experience in retail and QSR environments, we recognize how important it is to add the features and applications they are looking for with an upgrade, and with the high speed, 480FPS product Image Vault will expand into additional retail and restaurant segments where higher frame rates are needed."

Image Vault version 9.3.0 software includes:

- Added "hybrid" capability so traditional analog cameras and new IP cameras can be used simultaneously on the same DVR.

- Added "Group Connect" to Playback Software to allow for connecting to an unlimited number of DVRs simultaneously via network with Image Vault Pro Command Playback Software. No extra hardware required.

- Introducing a 480 FPS, high speed recording, hybrid DVR for applications which require higher frame rates than the standard 120 FPS unit offers.

- Added USB download support, to download video to USB media which can be scheduled to back up automatically.

- SMS Alarm output. In addition to email alerts, 9.3 Software can send real-time alerts via cell phone text messaging.

- Standard built-in DVD-R / CD-R Combo drive on all Pro Command DVRs.

- Added option to choose single or multiple selected events in the "External Audit Filter". Example: View "No Sales" and "Voids" from Register 1 on a specific date.

- "Quick View Buttons" Panel which allows operators to create a one-touch "favorite search" button. Examples: "Open all Register cameras" or "Display all Refunds" with the touch of one button.

**Image Vault EVA includes:**

- Server based software to manage ALL Image Vault DVRs on network.
Complete automation of the process of extracting and analyzing data collected by DVR - all the way up to an enterprise level
Increased granularity and flexibility of reports - either system-wide or broken down to the store level
Automatic monitoring the status of all recorders on network.
Automatic chain-wide software updates and settings changes.
Greater decision-making power and flexibility to user when managing larger networks of DVRs spread out across numerous locations

Image Vault version 9.3.0 was released May 1, 2008

To learn how Image Vault Pro Command integrates with POS systems, contact Brandon Ring, National Sales Manager, Image Vault at brandonr@fireking.com or 502-777-4910.

To add Image Vault EVA to an existing Image Vault, customers should have Image Vault Version 9.2.0 or higher Record Software and broadband connectivity. Image Vault EVA can be installed with a CD or remotely by Image Vault tech support or your authorized Image Vault Dealer.
